Classification for EOS (C-EOS)

Etiology

Congenital/Structural

Neuromuscular

Syndromic

Idiopathic

Cobb Angle
(Major Curve)

1: <20°

2: 21-50°

3: 51-90°

4: >90°

Maximum Total Kyphosis (-) <20º <u>N</u>: 21-50º (+): >50º Progression
Modifier (optional)

P0: <10º/yr

P1:10-20º/ yr

P2: >20º/yr

Etiology (In order of priority):

- <u>Congenital/Structural</u>: Curves developing due to a structural abnormality/asymmetry of the spine and/or thoracic cavity; includes hemivertebrae, fused ribs, post-thoracotomy, or CDH.
- Neuromuscular: Patients with neuromuscular disease (i.e SMA, Cerebral Palsy, muscular dystrophies, etc.)
- <u>Syndromic</u>: Syndromes with known or possible association with scoliosis (including spinal dysraphism)
- Idiopathic: No clear causal agent (can include children with a significant co-morbidity that has no defined association with scoliosis)

<u>Cobb Angle:</u> Measurement of major spinal curve in position of most gravity

Maximum measurable Kyphosis: between any 2 levels

<u>Annual Progression Ratio Modifier (optional)</u>: Progression per year; min. 6 months between observation

(Cobb @ t_2) - (Cobb @ t_1) X <u>12 months</u> $[t_2-t_1]$
